Montgomery Open Data

Bright Data

Claude AI

The Problem

City services are hard to navigate for residents.

1. **Fragmented information**
   City services are spread across multiple websites, departments, and phone numbers.

2. **Confusing reporting**
   Residents don't know which department handles their issue or how to file a report.

3. **No safety context**
   Infrastructure and safety updates are buried in separate portals.

4. **Time-consuming**
   Simple questions like "how do I report a pothole?" require multiple searches.

The Solution

One question. Instant guidance. Ready-to-send report.

"How do I report a pothole?"

↓

Public Works

Correct department identified

3 Clear Steps

Report → Track → Contact

Ready Report

Copy or email directly

Think of it as a civic concierge powered by AI and real Montgomery data.

Real Data, Real Context

Two data layers working together.

Montgomery Open Data Portal

19 ArcGIS datasets · Live REST APIs

- Tornado Shelters
- Weather Sirens
- 911 Call Data
- 311 Service Requests
- Paving Projects
- Fire & Police Stations
- Business Licenses
- Code Violations
- Food Safety Scores
- Parks & Trails

Bright Data · Web Intelligence

Crawl API · Public web scraping

- City News & Announcements
- Emergency Alerts & Closures
- Road Closures & Traffic
- Community Events
- City Council Updates

+3 bonus points

How It Works

1 → 2 → 3 → 4 → 5

1 Resident Asks

Natural language question

2 AI Analyzes

Prompt orchestration + context injection

3 Data Enriches

ArcGIS + Bright Data provide local context

4 Response Built

Structured JSON with dept, steps, report

5 UI Renders

Step cards, report, safety badge

Architecture Highlights

- Provider-agnostic AI layer — works with Claude, GPT, or Gemini
- Serverless proxy on Vercel — API keys never exposed to frontend
- Smart fallback system — auto/live/demo modes, always works
- Shelter enrichment — scores and ranks shelters by proximity and completeness
- City Health Score — composite metric from 911, 311, and infrastructure data

Key Features

AI Civic Routing

Natural language ⟶ correct department out of 12 categories

Report Generator

One-click structured reports, copy or open in email

Safety Badge

Dynamic green/yellow/red status based on query context

City Pulse

Live sidebar with 911, 311, weather, and infrastructure data

Shelter Finder

Scores and ranks tornado shelters by completeness and ZIP

Web Intelligence

Bright Data scrapes city alerts, closures, and events

Impact & Judging Alignment

/10

Relevance

Directly addresses "Improve city communication and public access"

/10

Quality & Design

Polished design, accessible HTML, robust error handling

/5

Originality

AI routing + shelter enrichment + report gen + safety awareness

/5

Social Impact

Helps all residents, especially those unfamiliar with processes

/5

Commercialization

Adaptable to any city with open data; SaaS potential

+3

Bright Data

Integrated Crawl API for live web intelligence

Montgomery Civic Concierge

AI-powered civic assistant for Montgomery residents
